SEVEN EIGHTY THREE

LAB FUNDING PROSPECTUS **APPLIED HUMAN-SYSTEMS RESEARCH** **PRE-SEED RESEARCH ROUND · 2026**

01 THESIS

Seven Eighty Three (783) is a research lab studying how people and organizations decide what to build, and whether that decision process can be made legible.

Human interaction is treated as a system with observable inputs and outputs, mapped across code, text, physical space, and organizational behavior.

02 RESEARCH QUESTION

Can the tacit signals practitioners use to make decisions be observed, documented, and translated into repeatable tools?

Hypothesis: actors, founders, and other practitioners already act on timing, audience response, and interpersonal resonance. That data is real but tacit. 783 makes it explicit without extracting from it.

03 UNIVERSE API OBSERVATION LAYER

INPUT	PROCESSING	OUTPUT
A question brought by a participant. 783 engages by invitation, not intervention.	Sustained observation in a low-noise research environment: the property walk method.	Patterns of timing, resonance, and decision-making, translated into frameworks and software prototypes.

The observation layer of the Universe API. Its index layer, under Infrastructure Design, structures how AI and search engines read the result.

04 LAB STRUCTURE: TWO ENTITIES

WILD-LAKE · RETAINED

The studio and research site. Houses the Talent Architect practice: non-extractive, retainer-based advisory where the practitioner waits for the question. Not for sale.

783 · FUNDABLE / ACQUIRABLE

The first company built inside the studio, and the investable vehicle. AI-assisted tools for human-systems mapping, founder calibration, and organizational resonance calibration.

WILD-LAKE keeps the method honest. 783 makes the method scalable.

05 12-MONTH DELIVERABLES

01 Field notes and case studies from 1:1 Talent Architect sessions.

02 A lightweight 783 prototype: prompt-based tooling that helps founders state their central question and track resonance over time.

03 Documentation of the non-extractive model itself, as a contribution to organizational studies.

06 INVESTMENT ANGLES

01 **R&D lab.** 783 as applied human-systems research, comparable to media labs and design research studios.

02 **Tool venture.** 783 as an AI product company: calibration software for founders and creative teams.

03 **Residency / foundation.** WILD-LAKE as the site, 783 as the output. Tax-advantaged and mission-aligned for arts, human development, and future-of-work funders.

07 THE ASK

ROUND	TERM	OUTCOME	USE OF FUNDS	GUARDRAILS
Small pre-seed research round. Not growth capital.	12 months of field work, formalized.	A publishable framework and a sellable v1 of 783.	Researcher time, documentation, prototype development.	No scale hiring. No extraction from research subjects.

If you fund labs that study how people actually work, not just how companies say they work, we should talk.

Seven Eighty Three.
Human systems, documented down to earth.
